Art Unit: 2615

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Kozuki et al (6,069,994).

Kozuki et al discloses in Fig. 7 and 3, a digital camera capable of capturing a moving image and recording the image, which comprises the digital camera which is capable of capturing a moving image and recording a captured moving image in a file (digital camera 113 can capture a moving image and still image that can be recorded in a tape 306, col. 7, lines 39-65; noted that compression circuits 307 and 308 processes digital images from processing circuit 303 so as to provide compressed image

data recording circuit 306, col. 7, line 55), recording mode setting device which sets one of a single recording mode and a continuous recording mode (switching circuit 305 and controlling circuit 313 can set the digital camera at two modes: still mode and moving picture mode; where in the moving picture mode, the digital camera captures continuous images); and a recording device which records, when the single recording mode is set by the recording mode setting device, the captured moving image in a newly created file, and records (still image recording areas 6 records a still image, where the still image is recorded in a separate area or file, col. 8, lines 1225), when the continuous recording mode is set by the recording mode setting device, the captured moving image additionally in an existing file in which a moving image is recorded (moving images are recorded in areas 5).

3. Claims 2-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2615

Abe et al discloses a digital camera that can record still and moving images.

Takahashi et al discloses an digital camera that can record compressed images in a still or moving mode.

Anderson discloses a digital camera that includes single image and burst image modes.
